MSc Business Analytics (Predicted Distinction) | BA Digital Marketing, 2:1 | SQL, Power BI, Excel, SPSS, Python

PROFILE

Business Analytics postgraduate (MSc completed) with SQL, Power BI, Excel, statistical modelling and Python, and a BA (Hons) Digital Marketing grounded in customer behaviour and market research. In MSc team projects, prepared 98,582 ecommerce orders for Power BI reporting, designed a relational SQL schema and analysed 44,986 loan records; individually, built churn models and ran an ethically approved survey study on AI personalisation and trust. Checks data quality before modelling, states the limits of the evidence and writes for non technical readers. Available immediately.

KEY SKILLS

Data and SQL	SQL (joins, window functions, aggregation), relational design, ERD, DFD, data quality and cleaning, GDPR
BI and reporting	Power BI, Power Query, DAX, Excel (dashboards, scenarios, optimisation), KPI reporting, data visualisation
Statistics and ML	SPSS, PROCESS, SAS Enterprise Miner, regression, mediation, factor analysis, classification models
Python and AI	Python (Pandas, figures, automated data checks, tests), AI assisted development with Claude
Research and digital	Survey design (Qualtrics), market research, consumer insight, Google Analytics (GA4)

PROFESSIONAL EXPERIENCE

Security Officer | Constant Security Services, Manchester — Oct 2025 to Present

- SIA licensed officer working shifts at client sites around Manchester; maintains accurate incident and handover records.

OTHER EMPLOYMENT

Hospitality Host | Manchester United, Old Trafford — Aug 2023 to Feb 2024

- Guest service in matchday hospitality suites, working with the floor team.

Food Production Operative | Greggs, Openshaw, Manchester (agency: The Best Connection) — Aug 2023 to Dec 2024

Housekeeper (temporary) | Macdonald Portal Hotel, Tarporley (agency: Mint People) — Aug 2021 to Sep 2021

ANALYTICS PROJECTS

Ecommerce BI Dashboard and Python Rebuild | Power BI, DAX, Python — MSc team project, then independent

- Our team cleaned 98,582 orders and 110,929 order items across eight linked Olist tables, fixing missing values, duplicates, orphaned keys and impossible delivery dates so the data could be trusted.
- We built a Power BI model with DAX measures and report pages on delivery, sellers and customer satisfaction, and presented the findings in a 15 minute group talk.
- Independently rebuilt the analysis in Python, with tests, as an interactive browser dashboard on the portfolio.

Gym Membership Churn Prediction | SAS Enterprise Miner — Individual MSc project

- Set an 85% accuracy target, then compared decision tree, logistic regression and neural network models on 4,000 members (26.5% churn); selected the neural network at 95.6% validation accuracy against 73.5% by predicting no churn for everyone.
- Kept the decision tree to explain flags to non technical stakeholders and proposed risk tiered retention for new members (60.8% churn in the first six weeks), incentives for longer contracts, and human review and drift monitoring.

Merchant Data Quality and SQL Database | SQL, ERD, DFD — Four person MSc team project

- Our team audited 1,000 Uber Eats merchant records and found delivery fees missing for 99.7% and ratings for 58.2%, making pricing and performance analysis unreliable.

- We mapped the data flows and relationships, then built a normalised six table schema with keys and timestamped history, plus seven queries (joins, window functions, aggregation) to rank merchants by city and segment price tiers.

Loan Affordability Risk Analysis | SPSS — Four person MSc team project

- Our team analysed 44,986 public loan records for a Nationwide case study, flagging implausible values (such as 100 years of employment experience for borrowers aged 35) before fitting a 12 predictor regression (R squared .617).
- We found loan amount was the strongest predictor of the loan to income ratio (β = .767) while credit score and interest rate were not significant, and reported heteroscedasticity and collinearity next to the coefficients.

AI Personalisation, Customer Trust and Loyalty | Qualtrics, SPSS, Python — Individual MSc dissertation

- Designed and ran an ethically approved survey of UK online shoppers (139 complete, eligible responses), with consent, completeness and duplicate checks, and analysed it in reproducible SPSS syntax using robust regression and mediation.
- Found that trust statistically mediated the link between personalisation and loyalty (association, not causation), and recommended that retailers monitor trust alongside verified behaviour, explain personalisation and give customers control.

Business Dashboard and Decision Model | Excel — Four person MSc team project

- Our team built an interactive management dashboard (KPIs, slicers, drill down), tested 60% to 70% margin scenarios with simulation and sensitivity analysis, and used optimisation to recommend a location and store configuration.

Restaurant Service Mix Analysis | Python, Pandas — Independent public data project

- Wrote a reproducible script that runs three automated checks on 244 public restaurant bills, derives bill per cover and tip rate, and compares lunch with dinner, stating what an operator would need before changing staffing.

Portfolio Website | Next.js, GitHub Pages — Independent, ongoing

- Designs and maintains a live portfolio of case studies using a documented AI assisted workflow with written briefs, independent review and build checks before anything is published.

EDUCATION

MSc Business Analytics, Predicted Distinction | Manchester Metropolitan University — Sep 2025 to Sep 2026

Completed; final award pending. Modules: Business Statistics and Data Modelling; Decision Making and Data Visualisation; Artificial Intelligence and Machine Learning.

BA (Hons) Digital Marketing, 2:1 | Birmingham City University — Sep 2022 to Jan 2025

Accelerated two year degree in customer behaviour, marketing analytics and market research. Individual final project: The Impact of AI on Marketing Strategies Targeting Generation Z.

BTEC Business (Double Award), D*D; A level German, B | Xaverian College, Manchester — 2020 to 2022

CERTIFICATIONS

- Google Data Analytics Professional Certificate, Coursera (2025)
- Google Analytics GA4 (2025) | SQL (Basic), HackerRank (2025)
- DMI Certified Digital Marketing Associate (2025) | HubSpot Content Marketing (2025)

ADDITIONAL INFORMATION

Native German, fluent English | Full UK driving licence | Open to hybrid, remote or relocation
